TABLE I
ROLE ASSIGNMENTS

Roles	Name	Task description and etc.
User	NUGU speaker users	The user's needs are the final goal of the project. They want to make their lives easier and more efficient through the output of the project. They can raise concerns and necessities to the project if their needs don't meet up to satisfaction. It is the most important their rules in a project.
Customer	SKT	Customers demand to the project to make satisfied with users. Customers are located between Develop teams and users. The user's needs through the whole project are really close to the main purpose of their rules because they are closely related to their interests. They want project teams to use NUGU speaker to satisfy users.
Software Developers	Hyunho Kim Kyumin Kim	Software developers are main resources of the the project. Their technical stacks and engineering skills create actual product. They demand core function requirements to Development managers which give them up to their developing process. Their final goal is to satisfy users and customers by realizing close to the requirements.
Development managers	Sangwon Kim Injun Hwang	Development mangers intercommunicate with Customer and Software developer to satisfy with whole stakeholders. They schedule time-lines to stick to the project before deadline. They build overall developing design process. So they should figure out what they are confronted by, such as threats and variables, plan projects and direct business matters that Software developers can't handle with. They support Software developers to focus on developing processes.
